DON'T GET CAUGHT OUT! , DON'T BUY WRONG... a boat can be Heaven or Hell.

Whether carried out ashore or afloat our unbiased SAIL or POWER surveys include the use of the latest hi-tech non-destructive ultra sound and laser equipment.

Whether you are buying or selling, we itemise what YOU desperately NEED TO KNOW and it's all contained within a comprehensive condition report on the Vessel itself, and the relevant Machinery, Electrical/Electronics etc.

No matter from which material your vessel is built, our aim is to tell you the Good the Bad and the Ugly, and to save you money! Should you not understand any point, we are always willing to explain to you in laymans language, the results of our inspection.

For an additional fee, we can also conduct a comprehensive sea trial to test the vessel and her inventory whilst underway. After all, why should you pay for what isn't working properly. Such tests can save thousands of your hard earned cash!

Simply contact us for an appointment, we come to you.

Additionally, we can advise on the costs of approved quality repairs and updates to all types of vessels , or on request, can carry them out for you.

If you are considering looking at several boats with a view to eventually buying one, we suggest you buy our book which explains in detail how to conduct your own surveys. A set of easy to follow survey forms are included, and when used in conjunction with the text, you'll be able to get an excellent idea of the condition of each vessel, and be able to compare them at your leisure to ensure the best value. There is also a chapter that will help you decide which type of vessel is most suited to your requirements.
